

Mixed Signal Oscilloscope

Lineup includes 200 MHz, 350 MHz, 500 MHz bandwidth models Lightweight and compact Large 8.4-inch LCD display Long memory: Up to 125M points (with /M2 option) High speed sampling: Up to 2.5 GS/s (1.25 GS/s with 4 ch)

DLM 2000

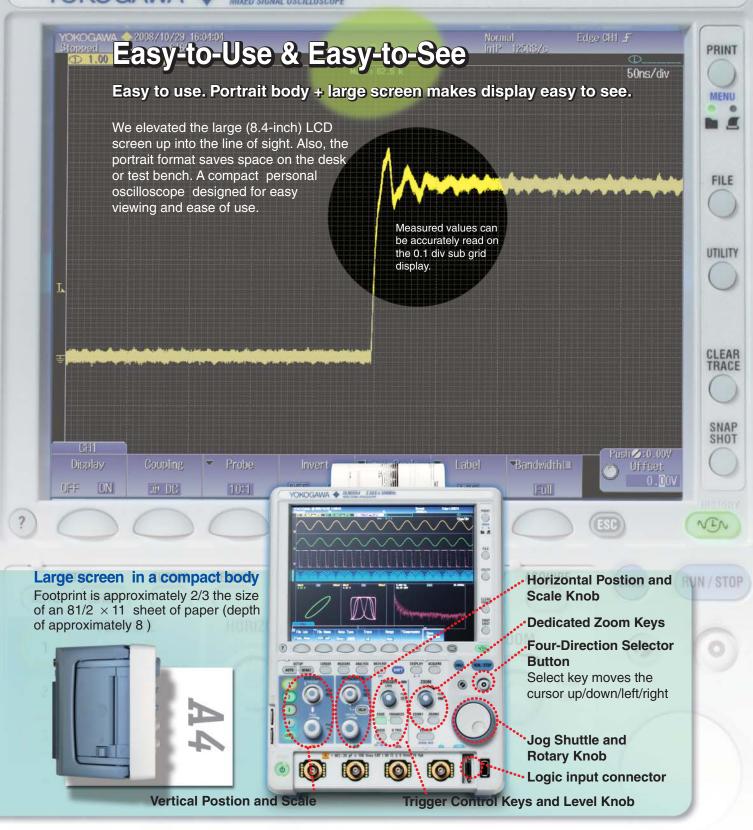

Bulletin 7101-00E

Flexible inputs and flexible performance

DLM2054 2.5GS/s 500MHz YOKOGAWA MIXED SIGNAL OSCILLOSCOP

Signal observation on 4 channels or more...

Flexible MSO Input

- Capture a mixed signals of analog and logic signals -

Four channels is not sufficient to view the functioning of digital control circuits. The DLM2000 series converts 4 ch of analog input to 8-bit logic, and functions as a 3 ch analog + 8-bit logic MSO (mixed signal oscilloscope).

3 ch analog + 8-bit logic

The performance of up to 11 inputs by converting to logic

Using logic input, up to 11 input signals can be observed simultaneously as 3 ch of analog and 8-bit logic. It is not only possible to use logic input for observation of data and control signals, or as a trigger source, but also for logic input analysis of I²C and SPI serial busses

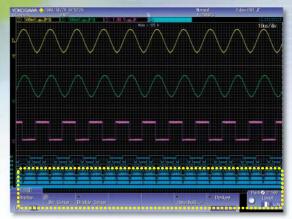

Logic probe for the DLM2000

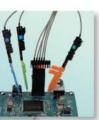

DLM2000 Series Lineup

Model	DLM2022 710105	DLM2032 710115	DLM2052 710125	DLM2024 710110	DLM2034 710120	DLM2054 710130
Analog input channels		2			4*	
Logic input		-			8bit	
Maximum sampling rate			2.5 GS/s (ir	nterleave ON)		
Frequency characteristics	200 MHz	350 MHz	500 MHz	200 MHz	350 MHz	500 MHz
Maximum record length	62.5 Mpoints (Single me	easurement, memory lengt	h:/M1S, interleave ON)	125 Mpoints (Single m	easurement, memory leng	th: /M2, interleave ON)

Fast data processing with ScopeCORE

With our proprietary ScopeCORE fast data processing IC, real time display is possible even when simultaneously measuring multichannel signals of 11 inputs.

ScopeCORE fast data processing IC

Or 3 channels when using logic input.

Sophisticated waveform acquisition engine

With long memory and the History function, you'll never miss an historical waveform. A variety of trigger functions reliably capture the waveforms you want.

Large capacity (125 Mpoint) memory enables long-duration measurements

For taking 2 ch measurements in Single mode, you can add the /M2 memory expansion option giving you up to 125 Mpoints of large memory capacity. 10,000 Hz signals can be recorded for up to 5,000 seconds. Even at a sampling rate of 1.25 GS/s, waveforms down to 0.1 seconds can be captured.

	Continuous Measurement	Single-Sho	ot Measurement
	2 ch, 4 ch same	With 4 ch (With 2ch for DLM20x2)	With 2 ch (With 1ch for DLM20x2)
Standard	1.25 Mpoints	6.25 Mpoints	12.5 Mpoints
/M1, /M1S memory option	6.25 Mpoints	25 Mpoints	62.5 Mpoints
/M2 memory option	12.5 Mpoints	62.5 Mpoints	125 Mpoints

Note)The /M1, /M2 memory expansion options are only available on 4ch models. The /M1S option is only available on 2ch models.

You can replay waveforms later on, so you'll never miss an abnormal waveform HISTORY

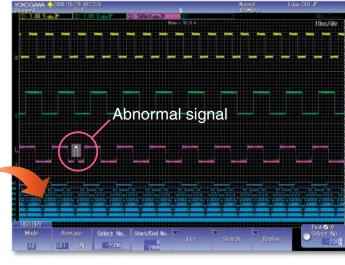

- History Function -

With the DLM2000 series, up to 20,000 previously captured waveforms can be saved in the acquisition memory. With the History function, you can display just one or all of the previously captured waveforms (history waveforms) on screen. You can also perform cursor measurement, computation, and other operations on history waveforms. Using the History function, you can analyze rarely-occurring abnormal signals.

History search function

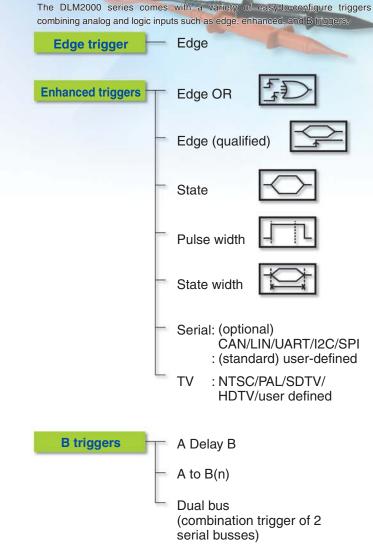

You can search the up to 20,000 previously captured waveforms for history waveforms that meet certain conditions. You can perform cursor measurement and other analyses on the found waveforms.

Replay function

Waveforms can be displayed in order, one at a time, by using the rotary knob. With the Replay function, history waveforms can be automatically played back, paused, fast-forwarded, and rewound.

Trigger Function capturing combined analog/digital complex waveforms

04

YOKOGAWA A DLM2054 2 505:1 5

position pulses and drive pulses.

 Serial pattern trigger (user defined):
 Example :Trigger on an arbitrarily set pattern of up to 128 bits. This is effective for detecting ID/Data and other portions of proprietary communication formats.

Trigger

Dual pulse trigger:

Example: Trigger on a combination of CAN and LIN bus triggers. I2C + SPI bus triggers, and other combinations are possible. Trigger when either LIN or CAN bus signal conditions become true

Input signal A CAN Input signal B LIN

C Real time filter with optimum noise reduction supports a wide range of frequencies (from 8 kHz to 200 MHz)

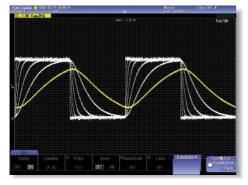

The DLM2000 series has two types of filters, one processed at the input circuit and one based on MATH functions. These filters are effective for rejecting unwanted signals, allowing observation of only the desired bandwidths.

or high pass filters.

Real time filters

Each channel has 14 low pass filters available from 8 kHz to 200 MHz. Waveforms of limited bandwidths are stored in internal memory.

Cutoff frequencies : 200 MHz, 100 MHz, 20 MHz, 10 MHz, 5 MHz, 2 MHz, 1 MHz, 500 kHz, 250 kHz, 125 kHz, 62.5 kHz, 32 kHz, 16 kHz, and 8 kHz

Processing with built-in filters

Zooms into two different points — Waveform zoom and search functions —

Zoom two locations simultaneously

Because the DLM2000 series lets you set zoom factors independently, you can display two zoomed waveforms with different time axis scales at the same time. Also, using the Auto Scroll function, you can automatically scroll waveforms captured in long memory and change the zoomed location. With Auto Scroll you can choose forward, backward, fast-forward, scroll speed, and other control options.

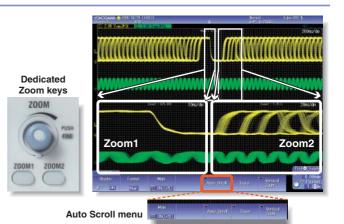

Computed digital filters

The input waveform can be filtered using an IIR filter, which is a

Cutoff frequency setting range : 0.01 Hz to 500 MHz

MATH function. Filtered waveforms can be displayed at the same time as the input waveform for comparison. You can select low pass

Filtering of a PWM waveform using computation

Large capacity memory gives you a variety of waveform search functions.

Two types of waveform searching:

Normally, searching for data takes time and costs money, and long memory is useless without functions for extracting desired data from a large capacity memory. That's why the DLM2000 series does not simply offer long memory, it also provides powerful waveform search functions.

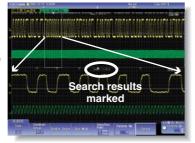

Searching for data in a single screen: the Zoom Search function

This function searches captured waveforms in the long memory and displays waveforms that meet the search criteria in the zoom area. The locations of the found waveforms are marked on screen ($_$ shows the current location).

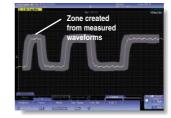

Searching for history waveforms: the History Search function

Criteria can be specified for extracting desired waveforms from up to 20,000 previously captured waveforms.

• Waveform search criteria Edge, edge (with conditions), state pattern, pulse width, state width, serial bus (only on models with the serial bus analysis option)

Waveform search using edge criterion

Searching for waveforms in zones created by moving measured waveforms up/down/left/right.

Criterion extraction

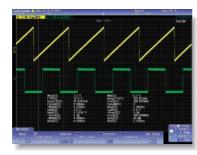

Search for waveforms that pass through/do not pass through a rectangular zone placed on screen.

Useful Functions Fastest and most capable analysis

DLM 2000 Series

Displays trends of peak-to-peak or pulse width per cycle — Measure function and statistics — — Trend and his

Twenty-eight waveform parameters are included such as: maximum, minimum, peak-to-peak, pulse width, period, frequency, rise/fall time, and duty ratio. Automated measurement can be performed using up to 20 of these waveform parameters. Also, waveform parameters can be measured

repeatedly, and the statistical values displayed (mean, maximum, minimum, standard deviation, etc.).

Measures voltage/time differences automatically — Cursor Measurement —

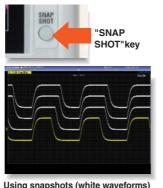

Cursors can be placed on the displayed waveform from signal data, and various measurement values at the intersection of the cursor and waveform can be displayed. There are six types of cursor; ΔT , ΔV , ΔT & ΔV , Marker, Degree Cursor.

Simultaneous level and time difference measurement with the $\Delta T \& \Delta V$ cursor

Keeps waveforms with one push — Snapshot —

By pressing the SNAPSHOT key to the lower right of the screen, you can freeze a white trace of the currently displayed waveform on the screen. You can press the key repeatedly and conveniently leave traces for comparing multiple waveforms. Also, snapshot data recorded on screen can be saved or loaded as files, and can be recalled for use as reference waveforms when making comparisons.

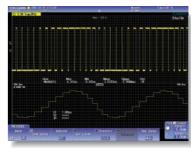

Has a GO/NO-GO function Abnormal waveform detected

GO/NO-GO can be determined using trigger conditions, zone waveforms, measurement parameters, and other criteria. For NO-GO, actions can be carried out at the same time such as sounding a buzzer, saving the current waveform, or sending notification to a designated e-mail address. Waveforms in which an abnormality occurred can be saved for confirmation and analysis of the phenomena at a later time.

— Trend and histogram displays —

Waveform parameters such as period, pulse width, and amplitude can be measured repeatedly and displayed in graphs. In a single screen you can observe period-byperiod fluctuations, compute amplitudes every screen using multiple waveforms, and display amplitudes as trends. You can also display histograms

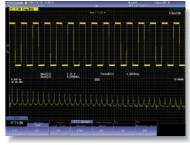

Trend display of waveform parameters Histogram display using the time axis

referencing the voltage or time axis using values from repeated automated measurement of waveform parameters.

Analyzes frequency spectrums — FFT analysis —

Up to 2 FFT analyses can be performed simultaneously. FFT can be performed on computed

waveforms in addition to the actual waveforms on CH1 to CH4. Analysis can be performaed of the frequency components of waveforms filtered for limited bandwidth, of frequency for changes in period of rotary objects, and other phenomena.

FFT analysis

Displays stored files in thumbnail format — Thumbnails of saved files —

Thumbnails of waveform data, waveform image data, and Wave-Zone files can be displayed. The image and file names are shown so that you can view screen image contents while copying or

deleting files. In addition to normalsized screens, you can even save wide images that have been zoomed along the time axis.

Solutions of the DLM2000 Analysis Applications

Serial analysis function options (/F1, /F2, /F3, /F4) - UART/CAN/LIN/I²C/SPI-

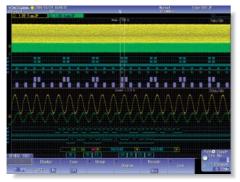

Triggers for UART, CAN, LIN, I²C, and SPI bus signals are supported along with decode display analysis (serial bus analysis option only on 4 ch models). Logic input can also be used for serial buses (excluding CAN and LIN).

Inputs supported	for serial	bus analysis
------------------	------------	--------------

	I ² C	SPI	UART	LIN	CAN
Analog input	Yes	Yes	Yes	Yes	Yes
Logic input	Yes	Yes	Yes	NA	NA

Simultaneous analyses of different busses: Two busses can be analyzed simultaneously. Waveforms and analysis results from busses with different speeds can be displayed in individual Zoom screens with different scales.

A wealth of trigger functions: A wide variety of trigger conditions can be set, such as ID/Data trigger combinations and combinations of serial bus triggers with normal edge triggers.

Simultaneous analyses of I²C and SPI

Accessories

 PBDH1000 differential probe

 1 MΩ, approximately 1.1 pF

 Maximum differential input

 voltage range: \pm 25 V

Differential probe (model 701920) DC to 500 MHz bandwidth 100 kΩ, approximately 2.5 pF Maximum differential input voltage range: ±12V

Simultaneous analyses of CAN and LIN

Power supply analysis option (/G4) (To be announced)

Dedicated power supply analysis options are available (4 ch models only) for switching loss, joule integral (i2t), SOA (safe operating area) analysis, harmonic analysis of power supply current based on EN61000-3-2, and other operations.

Switching loss analysis

Voltage and current waveforms can be input to the 62.5 MW (max.) long memory (/M2 models) for computation of switching loss (V(t) X i(t)). A wide variety of switching loss analyses are supported, including turn-on/off loss calculation, loss including continuity loss, and loss over long cycles (50 Hz/60 Hz).

Harmonic analysis of power supply current based on EN61000-3-2

Harmonics determined by the IEC standard that are generated by the target device can be judged for each applicable class (classes A-D). Bar graphs and lists can be displayed for comparing harmonic current limit values with values calculated from actually measured signals.

Harmonic current graph display

Connectivity & Software

DLM 2000 Series

Software

Xviewer (701992, sold separately)

Xviewer is software for use on a PC. It can be used for display, analysis, and conversion to ASCII of binary waveform data using waveforms captured by the DLM2000 series. By adding the MATH option, you can enter user expressions for performing waveform computations. FFT of up to 2 Mwords can be performed.

For details on accessory software, visit https://y-link.yokogawa.com/YL000.po Also, you can download free software and trial versions of retail software from this site.

DL series library (freeware)

This is an API that enables you to control a DL or send data from a DL using an external program. The API is offered in the form of a DLL that can be called from a program controlled by the user.

*1 Measured under standard operating conditions after a 30-minute warm-up followed by calibration. Standard operating conditions: Ambient temperature: 23C ±5C Ambient humidity: 55 ±10% RH Error in supply voltage and frequency: Within 1% of rating 2 Value in the case of repetitive phenomenon. The frequency bandwidth of a single-shot phenomenon is the smaller of the two values, DC to sampling frequency/2.5 or the frequency bandwidth of the repetitive phenomenon. *3. When the input section is shorted, the acquisition mode is set to Normal, accumulation is OFF, and the probe attenuation is set to 1:1. *4. Acquisition rate does not vary with an increase or decrease in channels.

External Dimensions

Unit: mm

DLM 2000 Series

Specification 1 $\text{M}\Omega$ input resistance, toggle frequency of 100 MHz

100 k Ω input resistance, toggle frequency of 250 MHz

10 MΩ (10:1), 200 MHz, 1.5 m

10 MΩ (10:1), 500 MHz, 1.2 m

DC to 900 MHz bandwidth/2.5MΩ/1.8pF

DC to 100 MHz bandwidth/max. ±700 V

DC to 1 GHz bandwidth/1M Ω /max. ±25 V

DC to 100 MHz bandwidth/max. ±1400 V

DC to 200 MHz bandwidth/max. ±20 V

DC to 15 MHz bandwidth/max. $\pm 500~V$

DC to 500 MHz bandwidth/max. ±12 V

DC to 50 MHz bandwidth, 30 Arms DC to 100 MHz bandwidth, 30 Arms

DC to 10 MHz bandwidth, 150 Arms

For models 701938 and 701939, 10 per set For models 701938 and 701939, 1 adapter.

DC to 2 MHz bandwidth, 500 Arms

For models 701938 and 701939

For models 701938 and 701939

Lot size is 10 rolls. 10 meters each For DL/WE series, standard version

Also for DL1600/DL1700E series

For DL/WE series, with MATH functions

red/black cables (3 ea.)

Round base, 1 arm

DC to 1 GHz bandwidth/100kQ/0.9pF

DC to 400 MHz, 1.2 m, 1000 Vrms DC to 250 MHz, 3 m, 1000 Vrms

NOTE

"Before operating the product, read the user's manual thoroughly for proper and safe operation."

Yokogawa's Approach to Preserving the Global Environment

• Yokogawa's electrical products are developed and produced in facilities that have received ISO14001 approval. • In order to protect the global environment, Yokogawa's electrical products are designed in accordance with Yokogawa's Environmentally Friendy Product Design Guidelines and Product Design Assessment Criteria.
